

SimpDoc

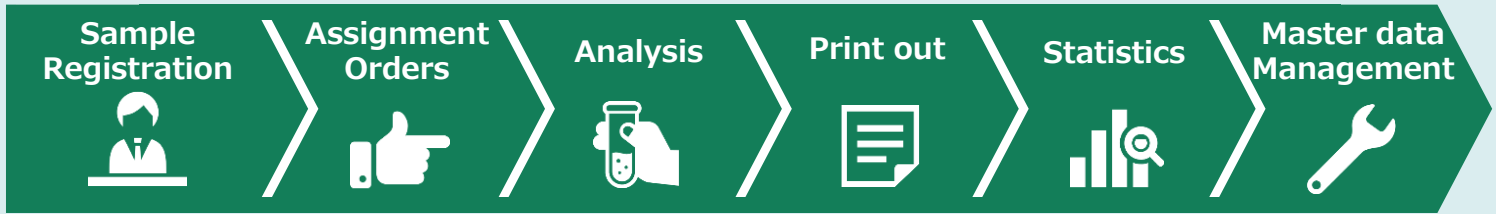

Applications for Forensic Services

- DNA Analysis
- Digital Forensics
- Forensic Chemistry
- Forensic Physics
- Document Examination

SimpDoc, a longtime favorite of the Japanese police, has been renewed for private testing agencies. **SimpDoc** is a **LIMS** (Laboratory Information Management System) that can **centrally manage all information** related to testing and analysis **with simple operations**.

Comprehensive Support for Laboratory Workflow

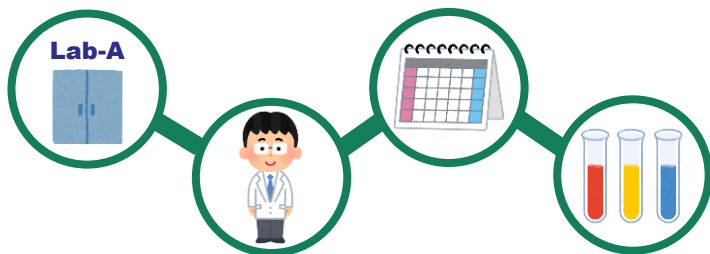

Collective management sample information with SimpDoc!

The workflow in the laboratory includes many things. SimpDoc supports comprehensively various laboratory tasks, for instance, sample registration for analysis, recording and sharing of the results, report writing, statistical processing and output of various forms, using an overwhelmingly easy-to-use system.

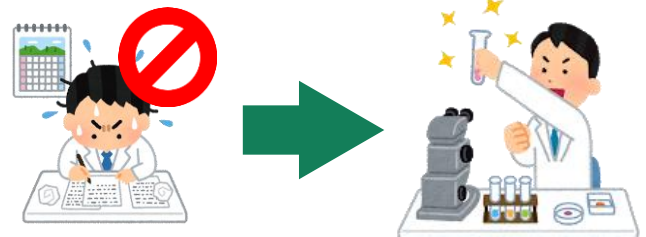

Strong Points

Improve Traceability!

SimpDoc manages all information including **where, who, when, and what to do**, for samples. It strongly supports companies that are required to ensure traceability from the viewpoint of quality control and risk management.

Reform Work-System in Lab!

SimpDoc can be connected to various analytical instruments. By automatically loading the results output from analytical instruments into SimpDoc, you can **make manual work efficient**. Also, **preventing human errors** increases reliability.

Simple and Useful!

Because of the simple screen configuration, you can operate intuitively. Even if you are new to LIMS, you can easily use SimpDoc.

High Expandability!

The functions can be expanded by linking with each our system. (Their availability varies by country.)

1 Sample Registration

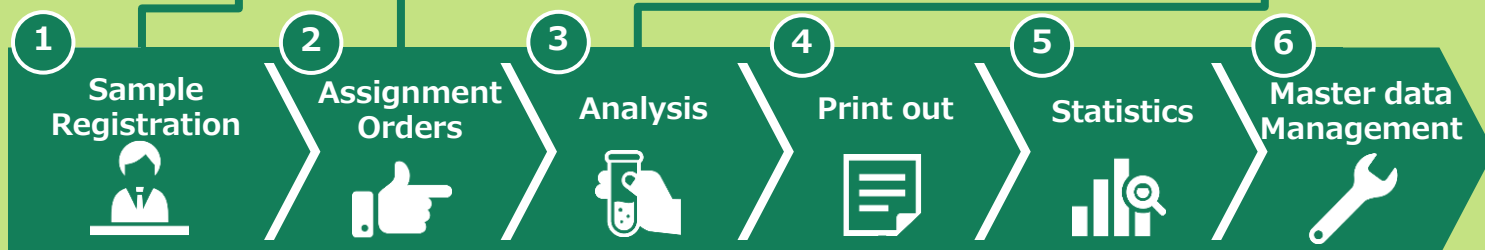

- Registration of sample information (Testing content, quantity, response deadline, etc.)
- Registration of requester information (Company, name, address, etc.)
- Batch import of information by CSV file
- Issue barcode and RFID stickers for sample management
- Cancel testing request
- Acceptance of testing request

2 Assignment Orders

- Researcher assignment
- Output of worksheets
- Output of testing instructions
- Output of forms required for testing
- Researcher schedule management
- Testing equipment schedule management
- List of the progress of testing

3 Analysis

- Testing result input
- Automatic threshold judgment of testing result
- Rounding of testing results
- Automatic import data from analytical instruments
- File registration for the results
- Registration for the multiple results
- Re-testing
- Log the results (Date and time, user, input value)
- Note about the testing

4 Print out

- Administrator approval
- Automatic pass / fail judgment
- Record approval history log
- Report output
- Report customization
- Multiple format reports
- Multilingual report
- Fax transmission of reports
- Fax transmission status list
- Remand for re-testing

5 Statistics

- Statistics creation and file output
- CSV file output of statistical data
- Weekly report, monthly report, daily report output
- Reagent data output
- Equipment data output
- Testing data output for each researcher
- Testing data output for billing
- Reference and output logs

6 Master data Management

- User registration / edit
- Authority setting
- Registration of analytical instrument master data
- Registration of the instrument status
- Registration of testing contents master data
- Registration of reagent master data
- Log management
- Application settings
- Periodic batch registration
